PROVEN & TRUSTED BY

Although machined surfaces may feel smooth to the touch, microscopically they have peaks and valleys. These irregularities can affect the lubricating film and can cause wearing throughout the system. FR3 FRICTION REDUCER's 3 patented synthetic lubricants are negatively charged and attach themselves to the lubricated surfaces inside a system. These carbon nano particles fill in these microscopic irregularities on the machined surface and provides a smoother surface for the lubricating film to form.

The synergy of these components extend the base oil performance in shear stability, oxidation stability, film strength & especially friction reduction.
